

ANESS RAHMANI

AI Data Specialist | Annotation | Data Quality | RLHF

d.rahmanianess@gmail.com • (+213) 669 23 13 86 • github.com/anness793 • [LinkedIn](#)

AI data specialist with hands-on experience in data annotation, proofreading, paired audio recording, and structured data cleaning across multiple freelance and contract engagements. Uniquely combines annotation experience with deep technical ML knowledge — having personally trained and evaluated computer vision models (YOLO, Video Transformers) on custom datasets. This gives direct insight into what good training data looks like and why it matters. Trilingual: Arabic (native), English (C2), French (B2-C1) — available for annotation and recording tasks in all three languages.

CORE SKILLS

Annotation types: Image/video labeling, bounding boxes, classification, text annotation, audio transcription and recording, proofreading

Data quality: Schema standardization, deduplication, inconsistency resolution, large-scale data cleaning

ML knowledge: PyTorch, YOLO, Video Transformers — trained and evaluated models on custom datasets

Languages: Arabic (native), English (C2), French (B2-C1)

Tools: Git, Python, MongoDB, SQL, Excel/CSV

RELEVANT EXPERIENCE

Language Data Contributor — Conversational Audio Recording (French-Arabic) | Volga Partners | Apr – Jun 2026 | Remote

- Completed paired conversational audio recording sessions in French-Arabic (Middle East/Africa region dataset) for a language data collection project supporting AI/speech model training
- Coordinated with an assigned recording partner to deliver sessions meeting quality review standards for dataset inclusion

AI Model Trainer (Personal / Thesis) | AcciSense Research Project | 2025 – 2026 | Remote

- Personally built and annotated BTVD, a custom 4-class video dataset for road accident severity detection
- Trained and evaluated 3 deep learning architectures (R3D-18, SlowFast R50, Video Swin Transformer), generating confusion matrices, per-class metrics, ROC curves, and Cohen's Kappa for each model
- Trained a custom YOLO model on a separate labeled dataset for specialized object detection
- Direct experience with what annotation quality and label consistency mean for model performance

Data Cleaning Contractor | Marine Biology Research Project | 2024 | Remote

- Cleaned and standardized a large database of marine species records for a scientific research team
- Resolved thousands of inconsistent entries, standardized classification schema, removed duplicates, and delivered a structured, analysis-ready dataset

Data Annotation & Content Specialist | Freelance (Upwork / LinkedIn) | 2022 – 2024 | Remote

- Completed multiple data annotation contracts for AI training datasets via Upwork and direct LinkedIn clients
- Performed audio recording tasks for speech dataset collection projects
- Delivered proofreading and text quality work across English and French content

EDUCATION

Master's Degree in Telecommunication Systems | Université Djilali Bounaama | 2024 – 2026 | Algeria

- Thesis: Automatic Road Accident Detection and Severity Estimation Using Deep Learning Models
- Relevant coursework: Machine Learning, Signal Processing, Network Security

Bachelor's Degree in Electrical Engineering | Université Djilali Bounaama | 2020 – 2023 | Algeria

WHY THIS COMBINATION MATTERS

Most annotators know how to label data. I also know what happens to that data afterward — how it gets loaded, batched, fed into a training loop, and how annotation errors propagate into model failures. Having trained models on my own labeled datasets, I understand the direct relationship between data quality decisions and model accuracy. I annotate with that context in mind.
